

Adventist schools— the longer children attend, the higher their average achievement.

According to *CognitiveGenesis*, a 4-year study of 30,000 North American Adventist school students, grades 3–9 and 11, each year at an Adventist school improves students' average scholastic achievement. This research, conducted at La Sierra University, is validating what parents, teachers, and students involved in Adventist education have known for years—that, overall, Adventist school students perform better than the national average.
